HYBRID COURSE | SEPT 19–20 AT 11:00 AM ET

Point-of-Care Ultrasound: Learn, Scan, Collaborate

The FAST (Focused Assessment with Sonography for Trauma) exam is a valuable skill that uses point-of-care ultrasound (POCUS) where the bedside provider can detect fluid in their real-time care of patients with trauma, cirrhosis, abdominal pain, and multiple other medical conditions. During this unique course, attendees will learn when and how to perform the FAST exam and tips & tricks to obtain optimal ultrasound images through a combination of lectures, hands-on instruction, and one-on-one mentoring time. It is designed for ultrasound practitioners with some prior experience who want to enhance their POCUS skills.

LEARNING OBJECTIVES
After participating in this activity, you should be able to:

• Describe ultrasound findings consistent with free abdominal fluid in the RUQ, LUQ, and pelvic regions;
• Describe ultrasound findings consistent with pericardial effusion as identified in the subxiphoid window;
• Recognize normal urinary system anatomy in contrast with urinary system pathology; and
• Obtain ultrasound images of the above exams with minimal virtual guidance.
