

## **System Requirements**

There are a few basic requirements for viewing videos through Vimeo online. We currently support the latest version of the following browsers:

- Chrome
- Firefox
- Safari
- Internet Explorer (IE)
- Native Android Browser

One of those browsers will be necessary to view Vimeo videos. If you are using one of the above browsers, you can grab the latest version [here](#).

The following table shows the minimum speeds required for each playback quality available for Vimeo videos:

<b>Quality</b>	<b>Required Minimum Bandwidth</b>
360p	1 Mbps
720p	3 Mbps
1080p	7 Mbps
2K	12 Mbps
4K & up	22 Mbps

When a video plays in lower than expected quality, it's likely because the viewer's Internet speed (bandwidth) or computer processing speed cannot support higher quality playback. Viewers can manually select a particular quality by selecting the gear icon in the lower right corner of the player. (Frequent buffering may result if the bandwidth does not meet the required minimum outlined above.)
